Summary

Senior Golang Developer with 10+ years of experience across e-commerce, payments, fintech infrastructure, and cybersecurity products. Designed and shipped event-driven Go and Python backends for payment platforms and high-load marketplaces serving 30M+ users, including Kafka-based transaction processing and provider integrations. Key competencies include systems design, high-throughput event processing, legacy-to-microservices migration, service reliability, and technical leadership.

Experience

Senior Go Developer, Wildberries – Remote

Sept 2022 – Present

Leading marketplace in Eastern Europe, 5M+ orders per day across 7 countries.

- Owned and evolved an event-driven B2B sales and payment backend for 30M+ users using Go, Gin, Apache Kafka, PostgreSQL, and gRPC
- Rebuilt the payment intake service in Go, eliminating unsafe concurrency and introducing database-backed event logging, ensuring full traceability of all incoming transactions
- Designed QR-based checkout flow on a national instant payment rail with event-driven settlement, cutting order payment time from 3 days to under 1 hour for 18% of B2B orders
- Introduced idempotent processing in refund handlers, eliminating duplicate refunds and ensuring financial consistency
- Architected a unified payment integration layer using contract-based adapters, enabling scalable onboarding of multiple gateways with a shared processing core
- Launched a gift certificate purchase flow integrated with existing event-driven payment services, driving ~€12M GMV from 500K units sold during the New Year peak
- Resolved critical performance issues in a PostgreSQL-backed B2B admin panel by optimizing SQL queries and eliminating bottlenecks, restoring system responsiveness and reducing page load time from 12s to under 1s

Senior Backend Developer, Selecty – Remote

Aug 2019 – Sept 2022

Software development company serving 300+ enterprise customers.

- Delivered backend systems across multiple enterprise client projects (facility operations SaaS, financial IaaS, internal tooling) using Go, Python, Kubernetes, Kafka, and Temporal
- Built backend from scratch for a residential building maintenance platform (Python, FastAPI, Celery, cloud infrastructure), designing the domain model and task generation engine used in a 200+ building pilot rollout
- Acted as tech lead, owning system architecture and building QA processes from the ground up, which reduced production defects by ~30% and improved onboarding of 2 junior engineers
- Integrated VMware vSphere 8 API for a major financial institution's IaaS, powering VM lifecycle and IP allocation across 3000+ virtual machines and 20+ internal teams
- Improved IP allocation reliability by integrating with IPAM and reducing manual administrator involvement by ~3x
- Implemented backend operations for F5 BIG-IP load balancer with tenant isolation
- Developed a shared health-check library for Kubernetes (liveness/readiness with dependency checks), standardizing service readiness across 8 of 12 platform microservices

Senior Backend Developer, Megamarket – Remote

May 2017 – Aug 2019

Major e-commerce marketplace, 16M+ monthly users.

- Built a high-load SKU matching and pricing intelligence system processing up to 60M products per run using Go, Python, FastAPI, PostgreSQL, and ClickHouse
- Decomposed a shared MS SQL Server monolith by extracting business logic from stored procedures into services and replacing shared DB access with APIs and Kafka, reducing cross-service queries by an order of magnitude
- Instrumented the matching system with OpenTelemetry and Jaeger for distributed tracing, adding Prometheus and Grafana metrics that reduced incident triage time on multi-service production issues by ~40%
- Split matching into a 4-stage pipeline (barcode, attributes, scoring, aggregation), implementing each stage as an independent microservice that could be deployed and scaled separately, reducing system coupling
- Shifted matching from per-SKU to 100-item batches, cutting PostgreSQL query volume from 1 per SKU to 1 per batch

Cybersecurity vendor with 1000+ enterprise customers, including tier-one banks.

- Developed backend services and built engineering infrastructure for high-throughput (up to 10 Gbps) network traffic analysis systems using Python, Django, PostgreSQL, Elasticsearch, and Ansible
- Developed Django/DRF APIs for network attack detection and administrative workflows, implementing data processing over Elasticsearch (network traffic) and PostgreSQL (application data) to support security analysis workflows
- Built a Python load testing framework for the DPI component using Flask-based orchestration, async execution (asyncio/aiohttp), DSL-defined thresholds, reproducible environments (Ansible), and PostgreSQL-backed run history, enabling systematic detection of performance regressions and reducing manual validation effort by ~3x
- Rolled out 500+ Pytest-based API tests and introduced Playwright-based UI automation, integrated with TeamCity and Allure, enabling nightly regression runs and detecting 7–8 regressions per month before release
- Developed Python detection plugins for brute force, password spraying, and NTLM relay attacks, expanding network intrusion detection coverage

Skills & Languages

Backend: Go, Python, Gin, Django, Django REST Framework, FastAPI, Kafka, RabbitMQ, PostgreSQL, MySQL, MS SQL Server, ClickHouse, InfluxDB, Elasticsearch, Redis, Temporal, Celery, Pytest, REST API, gRPC, API versioning

Architecture: Distributed Systems, Microservices, Event-driven architecture, Domain-driven design, High-load systems, SOLID, DDD, Clean Architecture, CQRS, Onion Architecture

Infrastructure: ELK, Grafana, Prometheus, OpenTelemetry, Jaeger, Kubernetes, Helm, Terraform, Ansible, TeamCity, Allure, VMware vSphere, F5 BIG-IP, S3-compatible object storage (AWS S3 API)

Methodologies: Agile, Scrum, Kanban

AI Tools: ChatGPT, Claude Code, Cursor AI, GitHub Copilot

Languages: English - fluent, full professional proficiency C1; Russian - native

Education

Specialist in Automated Systems for Information Processing and Control (equivalent to Master of Science) – Nizhny Novgorod State Technical University
